Emergency Alert Box

The Red "ALERT" button is used in case of any Emergency. This is also known as the "Panic" button. When pushed it will make a small beep, but will not voice anything over the radio. This will send a pop up alert that your Emergency button has been activated to UPD and several other designated computers. UPD will respond when this is activated.

The Yellow "RESET" Button will stop any messages from playing over the speaker. It will not reset any "ALERT" Notification when the "ALERT" Button is pushed.

The Blue "VOLUME" Button will turn the volume on the box up or down.

The Green "REPLAY" Button can be used to Replay any message that came across the box. This is helpful if only part of the message is caught/heard.
