Teaching Model:

The Information-Processing Models

- Information-processing models emphasize ways of enhancing the human being's innate drive to make sense of the world by acquiring and organizing data, sensing problems and generating solutions to them, and developing concepts and language for conveying them.

Approved Spring 2016

The Social Family Models: Building the Learning Community

- When we work together, we generate a collective energy that we call synergy. The social models of teaching are constructed to take advantage of this phenomenon by building learning communities. Essentially, “classroom management” is a matter of developing cooperative relationships in the classroom. The development of positive school cultures is a process of developing integrative and productive ways of interacting and norms that support vigorous learning activity.
