Program revision to the Dual Degree in Sustainability/MBA

ACTION REQUESTED:

Remove the MBA from the dual degree option for the MS in Sustainability.

RATIONALE:

With the changes in the MS in Sustainable Energy to an MS in Sustainability, the courses are not seen to have as much of a close connection as they are currently structured. With the required courses from the Sustainable Energy changing for the new MS in Sustainability, new courses will need to be determined that can be counted both towards the MBA and the MS in Sustainability. It is possible that the structure in the future will allow for a revised economics focus, when shared courses might be more easily identifiable and related to the connection between both programs.

EFFECTIVE DATE: Fall 2020
