- 2. Rationale for proposal:** The Commission of Sport Management Accreditation and previous accreditation teams have included sports law and legal aspects of sport as an important principle that should be included within the sports administration curriculum. The course would provide strategies for individuals to effectively work with lawyers and business executives as they enter the workforce. In-class and online discussions would allow the students to collaborate and synthesize the material with emerging legal topics and provide them with the ability to take real world scenarios into their own hands. An external review of the graduate sports administration program in spring of 2014 also recommended the addition of a sport law or legal aspect of sport course to comply with current curriculum guidelines.

**3. Justifications for (answer N/A if not applicable)**

Similarity to other courses: Currently there is no graduate level legal aspect to sport that is reflective to the sport manager/administrator.

Prerequisites: The prerequisites that are included are KSS 4760 or equivalent course which will offer a baseline knowledge to this graduate level legal aspect of sport course.

Co-requisites: none

Enrollment restrictions: The course will be limited to KSS Graduate Students as the content of the course is specific within the field of Sports Administration.

Writing active, intensive, centered: This course will be considered a writing intensive course because there are several assignments which the students will use writing to gain a deeper understanding of the content within the course. At least one writing assignment will be revised by the student after the instructor and peers have reviewed the document.

**5. Online/Hybrid delivery justification & assurances (answer N/A if not applicable)**

Online or hybrid delivery justification: As sports administration becomes more of a competitive field, many students have to work a variety of hours and require a flexible schedule. The material for this course could be transferred to an online format, if needed, to allow for the sport manager's schedule. The EIU-approved online learning management system will be used to provide a sound virtual learning environment for students enrolled in an online section of this course.

Instruction: The course management system's communication tools will be used to promote synchronous and/or asynchronous discussion and analysis of key course topics by students. The students will also be assigned a textbook for assigned readings. 'Quiz and survey' tools will be used to assess student learning and depth of content knowledge. Assignment 'dropbox' tools will be used to manage submission of learning activities, such as case studies, writing samples, and creative projects. Online versions of the EIU-approved assessment rubrics will be used to assess student performance. 'Grade book' tools will be used to assist with grade finalization and confidential grade posting. Online sections of the course will be taught by individuals successfully completing the OCDI training or meeting the other requirements of the technology-delivered course policy.

Integrity: The integrity of student work with the assessment process will be assured by utilizing the course management system's assessment settings such as randomization of test questions from a question database, using short answer and essay questions to test for depth of content knowledge, limiting student views of each question to one, and limiting the amount of time for each assessment to be completed. The integrity of student writing will be assured through the use of the EIU-approved anti-plagiarism software. This software will help assure original authorship of writing samples submitted by students.

Interaction: Regular interaction between student and instructor will be maintained through the use of EIU e-mail, the course management system's 'mail' tool, the course management system's 'chat' function, and web-based conferencing technologies. Student-to-student interaction during weekly synchronous and/or asynchronous threaded discussions centered on course content will be supported through the use of the course management system's 'discussion' tools.
