

Science Fair

Ms. Stodden’s Early Childhood Math, Science, and Social Science class made thematic units including the three subjects based around one specific theme and presented their science portion at a “Science Fair” on March 5th. These presentations were geared toward children from Kindergarten to 3rd grade. All of the science projects were interactive and hands-on. There were a few presentations on Environmental Science including one that reenacted an oil spill that also included the effects on the rest of the earth and animals, as well as ways to clean it up. The top photos show this demonstration and the bottom photos show a presentation on chimpanzees and another on cold temperatures.
